

H2020 Marie Skłodowska Curie - PhD Offer – Job position

LIVE-I

Lightening and Innovating transmission for improving Vehicle: Environmental Impacts

H2020 – MSC – ITN - EID

ESR 6: Lightweight transmission design through multi-objective optimisations and digital twins

Joint PhD between Ecole Centrale de Lyon (France) and Compredict (Germany)

About H2020 Marie Skłodowska Curie program:

The H2020 Marie Skłodowska Curie program is European Union funded programme for structuring researcher training, mobility and career development. The program targets are: Prestigious career opportunities, Excellent working conditions: employment contracts, full social security etc, Very competitive salaries.

About LIVE-I MSc Project:

Figure 1. Multi-scale treatments of noise and vibration induced effects for lightweight gearbox design;

For several decades, vehicles have seen their weight increase to meet more demanding requirements of safety and comfort. At the present time, manufacturers need drastically reduce the energy consumption and greenhouse gas emissions without sacrificing any safety or comfort. Each vehicle element must be considered for weight reduction. In this regard, gear transmissions are a first choice candidate. LIVE-I project main objective is to achieve breakthrough technological progress in the design of lightweight gear transmission and to build an innovative training network in order to educate early stage researchers in this hot topic. ([LIVE-I project website](#))

Keywords: Greenhouse reductions, Lightweight constructions, Gear transmissions, Noise and Vibration Harshness, Efficiency, Knowledge based design, Robust design, Digital twins, Metamaterials, Smart systems.

This project has received funding from the European Union's Horizon 2020 research and innovation programme under grant agreement No 860243

Description of the PhD workplan:

Objectives: The ESR research will be to push conventional gear transmission design with mass reduction objectives while keeping the NVH and efficiency performance. A multi-objective and high uncertain problem will be then formulated. The high dimensionality of the design space and its uncertain character provides a challenging issue to the gear transmission design. One can expect the optimization of realistic gear transmission to be very demanding. The development and implementation of digital twins will then be an important part of the work plan of this ESR. The most relevant data analysis method able to address the physical features of the LIVE-I problematic will be studied. The resulting twins will be validated against numerical modeling or experimental validations when available. Then the digital twins will be used for multi-objective design, giving the class of optimal configurations and assessing their main properties.

General information and position requirements:

36 months funding for early-stage researchers only. The MSCA is a researcher mobility programme. You are therefore required to undertake transnational mobility in order to be eligible for recruitment. As such, applicants must not have resided or carried out your main activity (e.g. work, studies) in **France** for more than 12 months in the 3 years immediately before the recruitment date ([Link1](#)). Recruited researchers will be hired by the academic beneficiary and must spend at least 50% of their recruitment period with the industrial beneficiary.

Requirements for applicants are:

- Excellent track record,
- Fluent English (written, verbal),
- Analytical skills and outstanding problems solving abilities,
- Passion for science and technology, motivation to undertake transnational mobility,
- Solid background in Mechanical Engineering, Mathematics, Acoustics and Material Science.

Benefits for the researcher:

- Prestigious PhD programme (Marie-Curie) including a very competitive salary,
- Work with renowned research scientists and industrial experts,
- Be exposed to multiple sectors (research labs, industry, start-ups/SMEs),
- Receive intensive training on a broad set of career-enabling skills (i.e. scientific, personal, communication, entrepreneurship, ...),
- Benefit from a 3-years immersion in an industry-oriented research environment with excellent career opportunities in both public and private sectors.

Application deadline: May 31, 2020 ; Expected starting date: October 1st, 2020

Please visit the “Call for applicants” tab on the [LIVE-I project website](#) for the online application form and more information.
